DETAILED ACTION

1. This Office action is in response to Application No. 09/890,769, filed on 12/03/1999.
2. Claims 1-22 are pending.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1 and 4-22 are rejected under 35 U.S.C. 103 (a) as being unpatentable over Van Wie et al (U.S. Pat. No. 5,943,422) in view of Lambert et al (U.S. Pat. No. 6,629,138).

As per claims 1 and 4-22 Van Wie substantially discloses an electronic steganographic that can be used to encode a rights management (or content distribution) control signal onto in an information signal carried over an insecure communications channel, the content distribution system comprising:

Distribution server includes: a determining unit operable to determine, when the distribution server is accessed by one of the user terminals, whether the user terminal has connected to the distribution server using one of the at least one pieces of location information (see., abstract, col 1, lines 22-31, col 3, lines 12-67, col 5, lines 9-59);

a generating unit operable to generate: a piece of first payment information instructing the user terminal to pay a purchase fee to the distribution server, when the user terminal is determined to have connected without receiving the piece of location information; a piece of second payment information instructing the user terminal to pay a purchase fee to both the distribution server ; and a transmitting unit operable to transmit one of the generated pieces of first and second payment information and a digital content to the user terminal (see., abstract, col 5, lines 9-59, col 9, lines 13-65, col 32, lines 20-49, specifically wherein said first and second rules requiring payment.

It is to be noted that Van Wie fails to explicitly disclose a reference server to hold one piece of information. However, Lambert discloses a reference server that identifies reference which represents a likelihood relative to the rest of said identified references that said various data identified by each said identified reference will be requested by an application program (see., abstract, col 2, lines 42-60). Therefore, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to modify the content distribution of Van Wie by including the limitation detailed above as taught by Lambert because this would analyze initial data requested from the server by one or more applications running on the network.

Allowable Subject Matter

5. Claims 2 and 3 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.
